

KM AntPro LLC®

Insect Attractant Bait Lure™

Fast Track Instructions

Important, read the accompanying complete label instructions prior to using this product, and any insecticide product's label you use in combination with it.

When preparing 5 working gallons in combination with an active insecticide.

1. Begin by adding “KMIBL” package contents to a minimum of 2 gallons “7.6 L” of warm water, (distilled, bottled or equivalent) gradually stirring the dissolving bait material.
Do not use chlorinated water from tap.

Combine insecticide ingredients simultaneously with KMIBL.

When using 98% concentration of “Disodium octa borate tetrahydrate powder EPA Reg. No. 64405-8, or Ortho boric acid, or Boric acid - EPA registration No. 73605-10 add 6.4 ounces, 1% of finished five working gallons of bait.

Stir till added ingredients appear to be dissolved within the existing water content.

2. After the KMIBL and the combined active insecticide is dissolved add additional water to make 5 total finished working gallons of bait by volume.

Stir lightly, then cover and seal container.

Replenishing AntPro Bait Dispensers

Please note, when refilling the bait dispensers add the new bait to any existing bait remaining in the dispenser’s reservoir.

Maintenance: we recommend dispensers be rinsed out and wiped clean at least once a year, and the base unit as deemed necessary.
