

Evolve™ Soft Bait

Restricted Entry Interval (REI) & Pre-Harvest Interval (PHI)

Evolve Soft Bait is not regulated at the federal level as a pesticide per Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 25(b) minimum risk exemption, and thus does not contain any labeling claims referring to the Worker Protection Standard (WPS) and/or Agricultural Use Requirements. For pesticides regulated at the federal level per FIFRA Section 3, the WPS statement and Agricultural Use Requirements section typically contain information regarding the Restricted Entry Interval (REI) and Pre-Harvest Interval (PHI) on the label. Since Evolve is not regulated under FIFRA and not subject to WPS or Agricultural Use Requirements, no REI is required.

PHI ties back into residue chemistry data whereby active ingredient concentration is measured to decline to acceptable levels during that hold-over time between pesticide application and crop harvest. Since Evolve is formulated with acceptable food-use active and inert ingredients that are exempt from the requirement of tolerance, no PHI is required.
